

Plant selection according to ecological criteria

Claudia Schwarzer is a landscape architect and, together with her husband Udo, has been running a landscape planning office in Portugal for 25 years, specializing in swimming ponds, constructed wetlands and biological water treatment systems (www.biopiscinas.pt). In this time more than 200 swimming pond projects of private and tourist use have been realized. Claudia Schwarzer is a founding member and currently one of the cash auditors of the IOB and board member of the Iberian swimming pond association GIABN.

The lecture "Plant selection according to ecological criteria" focuses on the requirements of aquatic plants. How can these be taken into account so that the plants can fulfill their intended role in the biological purification system and also in the long term? Which is the right combination of different types to suitable compositions?
